TEACHER LIBRARIAN MODULE 4 – LESSON PLANNING & ASSESSMENT FOR INQUIRY BASED LEARNING

Canada's Interactions with the Global Community using VR Viewers, VR Apps (Ascape), & Google Expedition

RATIONALE & NEW TOOL FOR COLLABORATION

This year, I am mentoring a new grade six teacher. He has requested that I guide him through creating and teaching cross-curricular lessons. Right now, each of our classes are working on Biodiversity in Science, and Canada's Interactions with the Global Community, so we are collaborating on how to bring these together through engaging activities. These units connect fairly well through big ideas, such as fair trade and human consumption, eco-systems, our impact on the Earth, Canada's connections to world organizations, habitat loss, extinction, invasive species, social responsibility, and considering multiple perspectives.

A new tool I learned about in this module was Google Expeditions (thanks to Steve!). I think using VR would be great in showing kids the places in the world that we are discussing. My school doesn't have an Expedition kit yet, so I did some research and found some similar VR apps (Ascape) available to offer a similar experience, and based my lesson on that. If we are discussing the global and social impacts of culling ivory from African elephants, for example, we could take a virtual fieldtrip to Africa, and get up close to the elephants in an elephant sanctuary. Virtual field trips are an alternate way to approach complex global topics in the classroom. By "visiting" countries other than their own, students can explore and make connections to the greater world. These experiences can enhance learning by providing real-world examples and promoting social change. By exploring Manchu Picchu and the Great Barrier Reef, students can make connections to the ecosystem, along with climate change and coral bleaching. Google is using the VR World through the creation of "five Expeditions around global social justice issues including one titled *Beating Ebola in Sierra Leone*. Others tackle themes like empowering girls in Bangladesh and the lives of refugee children in camps in Lebanon," (Carara, 2017). These kinds of stories and experiences can be difficult to describe to students, and for students to visualize. VR experiences can provide context, deepen their understanding of world issues and the experiences of others. Another company to link VR and education is ThingLink. They have created a series of 360° interactive stories, narrated by women around the world, "highlighting information about education, healthcare, social justice, as well as women's economic and political participation globally. The goal of the project is to help educators, students or parents address complex topics such as global gender equality with a new kind of immersive learning experience." (Koivula, 2017). In addition to opening up discussions about tough issues, the VR experience sparks active engagement and rich questioning.

INQUIRY CONNECTION (from the Ontario Curriculum, Social Studies Grades 1–6, pages 61–62)

Through **formulating questions**, students can explore issues in order to identify the focus of their inquiry. Second, students can **gather and organize** the information learned to help answer their initial questions. Next, through **interpreting and analyzing,** students can apply the relevant information by identifying key points or ideas, analyze events, developments, and/or issues, determine the importance of an issue for other groups of people, determine if all points of view are represented, and which, if any, are missing. Following interpretation, students **evaluate and draw conclusions** by synthesizing the data or information, make informed judgments, and make connections. Finally, they can **communicate** their learning in a variety of ways (Google Slides, Voicethread, green-screen video…).

ASSESSMENT & EVALUATION (from Growing Success)

The assessment tools (diagnostic/formative/summative) used throughout the lesson are b*ased on Assessment FOR Learning and Assessment AS Learning*. This could include success criteria, checklists, observation notes, and so on. In addition, I chose to include an Exit Ticket on which individual students can write a reflection about what they've learned, and how the VR experiences reinforced their learning and prompted further questioning.

The Concepts of Social Studies Thinking – from the Ontario Curriculum, Social Studies Grades 1-6, pages 58-60

The six concepts of social studies thinking – significance, cause and consequence, continuity and change, patterns and trends, interrelationships, perspective – underpin all thinking and learning in social studies. The Ontario curriculum provides sample questions related to each of the concepts, and highlight opportunities for students to apply a specific concept in their studies.

Significance
This concept requires students to determine the importance of something (e.g., an issue, event, development, person, place, process, interaction). Students come to understand that significance often depends on the context or situation: for example, what is important to one person or group of people may not be important to another. The significance of something is generally determined by its short- and/or long-term impact on people and or places.

Cause and Consequence
This concept requires students to determine the factors that affect or lead to something (e.g., an event, situation, action, interaction) as well as its impact or effects. Students study the causes and consequences of various types of events, situations, and interactions in both the natural environment and human society.

Continuity and Change
This concept requires students to determine what has stayed the same and what has changed over a period of time. Continuity and change can be studied with reference to ways of life, political policies, economic practices, relationships with the environment, social values, and so on. Students make judgments about continuity and change by making comparisons between some point in the past and the present, or between two points in the past.

Interrelationships
This concept requires students to explore connections within and between natural and/or human systems, including how they adapt to and have an impact on one another. Students explore various components within a system, interactions between components of a system, and relationships between systems.

Perspective
This concept refers to the ways in which different individuals and/or groups view something (e.g., an issue, event, development, person, place, process, interaction). Students learn that different groups have different perspectives, which depend on factors such as beliefs, social position, and geographic location, among others. Students also learn the importance of analyzing sources to determine whose perspectives they convey and of gathering sources that reflect multiple perspectives.

Patterns and Trends
This concept requires students to study characteristics that are similar and that repeat themselves in a natural or human environment (patterns) and characteristics or traits that exhibit a consistent tendency in a particular setting and/or over a period of time (trends). The characteristics may be spatial, social, economic, physical, or environmental. Students discover patterns by making connections between characteristics; they discover trends by making connections between those characteristics over time.

SAMPLE QUESTIONS FOR DEEPER THINKING:
-How do we determine the importance of certain developments or events? (Grade 6, Overview)
-What impact does Canada's consumption of coffee or chocolate have on the people and environment of the producer countries? (Grade 6, B2.1)
-What types of organizations existed in the past, or exist now, to help new immigrants in Canada? (Grade 6, A3.5)
-Why does the issue of invasive species require action at the international level? (Grade 6, B1.3)
-How might the opening of a mine both help and hurt a community? (Grade 4, B2.1)
-Whose voices should be heard in discussions about the building of a new housing subdivision? (Grade 5, B2.1)

INQUIRY BASED LESSON PLAN – Canada's Interactions with the Global Community using VR Viewers, VR Apps, & Google Expedition

Strand/Topic: Canada's Interactions with the Global Community	Grade: 6	Date: May , 2019

Big Ideas & Social Studies Expectations

- The actions of Canada and Canadians can make a difference in the world.
- Global issues require global action.
- Canada and Canadians participate in the world in many different ways.

Global issues require global action B2: use the social studies inquiry process to investigate some global issues of political, social, economic, and/or environmental importance, their impact on the global community, and responses to the issues

Application B1.3: explain why some environmental issues are of international importance and require the participation of other regions of the world, along with that of Canada, if they are to be effectively addressed (e.g., issues such as global warming, carbon dioxide and sulfur dioxide emissions, ownership and availability of fresh water, deforestation, overfishing, invasive species, habitat protection of migrating species, or disposal of electronic waste)

Sample questions: "Why does the issue of invasive species require action at the international level?" "How have disagreements over ocean fishing affected fish stocks in Canadian waters?" "Why can the disposal of your old computer be an environmental issue of international importance?" "What are the main sources of smog in southern Ontario?"

Inquiry B2.1: formulate questions to guide investigations into global issues of political, social, economic, and/or environmental importance (e.g., child labour, dwindling oil supplies, ownership of and access to fresh water, climate change, food shortages, refugees, or natural disasters), their impact on the global community, and responses to the issues

Sample questions: "What was Canada's role in a recent relief effort in another part of the world? Was this effort sufficient to meet the needs of the distressed population?" "What impact does Canada's consumption of coffee or chocolate have on the people and environment of the producer countries?" "How have the Canadian government and the Canadian people reacted to the melting of Arctic ice fields?"

Connections to other Curricular Areas

Language, Thinking: Use of planning skills (e.g., generating ideas, gathering information, focusing research, organizing information), Use of processing skills (e.g., making inferences, interpreting, analyzing, detecting bias, synthesizing, evaluating, forming conclusions), Use of critical/creative thinking processes (e.g., reading process, writing process, oral discourse, research, critical/creative analysis, critical literacy, metacognition, invention)

Language, Communication: Expression and organization of ideas and information (e.g., clear expression, logical organization) in oral, visual, and written forms, including media forms

Language, Application: Transfer of knowledge and skills (e.g., concepts, strategies, processes) to new contexts, Making connections within and between various contexts (e.g., between the text and personal knowledge or experience, other texts, and the world outside the school; between disciplines)

Oral Communication, Active Listening Strategies 1.2: demonstrate an understanding of appropriate listening behaviour by adapting active listening strategies to suit a variety of situations, including work in groups (e.g., ask questions to deepen understanding and make connections to the ideas of others; summarize or paraphrase information and ideas to focus or clarify understanding)

Reading, Making Inferences/Interpreting Texts 1.5: develop interpretations about texts using stated and implied ideas to sup- port their interpretations Teacher prompt: "What is the story between the lines ... beyond the lines? What clues did the author give that led to your conclusion? Why do you think the author doesn't state these ideas directly?"

Reading, Extending Understanding, 1.6: extend understanding of texts by connecting, comparing, and contrasting the ideas in them to their own knowledge, experience, and insights, to other familiar texts, and to the world around them Teacher prompt: "How does the author's treatment of this topic compare with treatments of the topic in other sources?"

Media Literacy, Producing Media Texts, 3.4: produce a variety of media texts for specific purposes and audiences, using appropriate forms, conventions, and techniques (e.g., a collaborative Google classroom Slide, or discussion, to talk about their wonderings and then pursue research to answer their own questions or the questions of their peers.

Equity/ Diversity and Social Justice (Teacher Actions) *What actions do I take to ensure the lesson is attainable to all students?*

This activity/lesson is highly visual and kinesthetic, as students will be gathering information through 'doing', touching, feeling, experiencing the material at hand (through the virtual reality viewers).

Kinesthetic learners are most successful when totally engaged with the learning activity. They acquire information fastest when participating in an active, hands-on activity. Hands-on teaching techniques address the challenging needs of kinesthetic learners, as well as the diverse needs of auditory and visual learners.

Gathering information visually and kinesthetically will benefit 'reluctant' learners, as well as the English as a Second Language Learners (ESL) in the class. They will learn and review some of the important unit vocabulary with the ESL teacher, and will be placed in small groups in which they will be provided with peer support.

Teacher(s) will circulate for observation, assistance, and clarification throughout the lesson.

This class of students particularly enjoy technology, world issues, animals, and hands-on learning, so there really is something for everyone in this lesson!

Readiness & Connection to Culminating Activity

This lesson falls mid-unit. Before the lesson, students will be familiar with some of Canada's connections to the world (interactions, trade, imports, exports) Within the same group of lessons on **Environmental Impact**, students will answer ~How does where I buy goods from affect the environment? and ~ Why can it better to buy locally or globally? (Activities: discuss imported fruit, watch video: *Story of Stuff,* complete Model Process Charts for product of choice & research, 'Life-cycles' of researched products, Perspective Cards).

The lesson is an introduction/ minds on provocation for inquiry. After this lesson, we will discuss the connection: international trade can harm the environment by encouraging industry. A good example is the loss of biodiversity. Fishing, hunting, and forestry can also endanger plant and animal life directly, by overuse of resources, and by depleting habitats. Governments can reduce environmental damage by setting rules for industries (like, for example, banning the importation of ivory).

Culminating Task: Global Issues

- Inquiry questions to be decided by students

Student will complete an inquiry-based project on how, as Canadians, they can participate in the world by acting locally and globally.

The culminating activity has three parts:

1. Through the inquiry process, choose and investigate a global issue faced by a particular country –political, social, economic, or environmental.
2. Investigate an organization that exists to address the particular global issue selected.
3. Create an action plan to help address that global issue.

*Students will also use the VR Viewers and **Google Expedition** to take a 'Virtual Fieldtrip' to the country they choose, and gather information.

Learning Goals *(in student friendly language)*

We are learning to:

- Use our active listening skills to work well in groups.
- Make inferences using clues and prior knowledge.
- Describe the ways Canada's interactions through trade have affected the environment.
- Ask inquiry questions about environmental and global issues.
- Answer our inquiry questions by gathering information.
- Organize the information we gather.

Differentiated Instruction Details

❒ Learning materials (content)

- Lesson designed based on variety students' learning styles (visual, kinesthetic, auditory, words)
- Use of visuals, graphic organizer, 'props'
- ESL students will learn some unit vocabulary in advance, with the help of their ESL teacher

❒ Ways of learning (process)

- Preferential grouping / seating to benefit and support students with higher needs (reluctant learners, ESL students, students with learning difficulties)
- Assess students' learning using formative assessment (observation, questioning, discussion, graphic organizer, learning response/exit slip)
- Continually assess and adjust lesson content to meet students' needs.

❒ Learning environment

- Manage the classroom to create a safe and supportive environment.
- Use classroom management techniques that support a safe and supportive learning environment.

❒ Ways of demonstrating learning (product)

- Assess students' learning using formative assessment (observation, questioning, discussion, graphic organizer, learning response/exit slip)
- For the culminating task, students will be able to demonstrate their learning in their preferred learning style. They will choose to work in pairs, small groups, or individually. They will be provided with options (voice recording, blog, Google Slides, report, brochure, green-screen video…).

Vocabulary Related to the Unit *(provide vocabulary sheet to students & to ESL teacher in advance)*

accord, aid, barter, culture, developed country, developing country, economy, economics, environment, exchange, export, geography, global, history, immigration, import, intergovernmental organization, international convention, local, media, natural resource, non-governmental organization, politics, relief efforts, social, technology, tourism, trade

The Lesson - Part 1: Minds On APPROX. 10 MINS.	Prompts & Questions	Materials
What strategies can I use to activate students' prior knowledge? Minds On (Hook) ◆ Connecting to prior learning and/or experiences ◆ Setting the context for learning Looks Like… • brainstorming • discussion • reviewing previous material **Rationale** Provocation for Inquiry: Any virtual reality experience/ VR Cardboard experience that is connected to what students are studying can be an effective Minds On or a provocation for an inquiry unit! Hands-on, immersive learning is engaging for all types of learners. 1. Make connections: connect to prior learning and experiences, connect students to the learning and to each other, link back to previous lessons, link forward to what's to come. • Activate students' prior learning/knowledge **Whole Class:** If you could go anywhere in the world, where would you go? We've been talking a lot about the world, and the way Canada interacts with other countries. Who can remind us of some ways Canada interacts with the world? Well today, we're doing something a little bit different. We're going on a field trip –A virtual field trip! Today, you're travelling somewhere in the world. You're going to use your eyes and minds to gather clues about this place. You're also going to come up with questions you have about what you discover. 2. Explicitly identify the lesson's learning goals. Read / review our unit and lesson learning goals (posted) 3. Establish a positive classroom climate: welcome students, invite them into the lesson • Engage students emotionally and cognitively • Motivate students to engage • Respond to a thought-provoking question • Set a tone, tempo On today's virtual field trip, I want you to to work together as a group to figure out where you are, and why I might have sent you there. It will be important to take turns using the viewer, but to also listen to each other carefully. 4. Prepare for learning, move students toward the critical learning • Orient students to the topic, materials, activities • Create a mental set • Anticipate key lesson activities • Connect to students' interests Today you'll be working in your Social Studies groups. Each group will have one phone, one virtual reality viewer, and one graphic organizer per person to record thoughts, clues, details, and inquiry questions. To use the VR viewer, please hold it with two hands at all times *(demonstrate how to load)*. Once in the APP switch to VR mode (by clicking the viewer icon) and then hit 'play'. 5. Develop interpersonal, learning, collaborative skills Encourage/review active listening, volume control, what successful group work looks like/sounds like Have a great trip! You will have about 20-25 minutes for your journey.	**If you could go anywhere in the world, where would you go?** We've been talking a lot about the world, and the way Canada interacts with other countries. **Who can remind us of some ways Canada interacts with the world?** Well today, we're doing something a little bit different. We're going on a field trip –A virtual field trip! Today, you're travelling somewhere in the world. You're going to use your eyes and minds to gather clues about this place. You're also going to come up with questions you have about what you discover. On today's virtual field trip, I want you to to work together as a group to figure out where you are, and why I might have sent you there. It will be important to take turns using the viewer, but to also listen to each other carefully. Today you'll be working in your Social Studies groups. Each group will have one phone, one virtual reality viewer, and one graphic organizer per person to record thoughts, clues, details, and inquiry questions. To use the VR viewer, please hold it with two hands at all times *(demonstrate how to load)*. Once in the APP switch to VR mode (by clicking the viewer icon) and then hit 'play'. Use the viewer more than once each so you don't miss anything! Have a great trip! You will have about 20-25 minutes for your journey.	**Technology** -Digital projector -Computer -Elmo projector -Virtual reality viewers (one per group) -One 'smartphone' per group -Ascape App (pre-downloaded onto phones) **Manipulatives/Props** -Virtual reality viewers (one per group) -One 'smartphone' per group **Instructions for Students** -Learning Goals posted -Success Criteria posted **Handouts/Scaffolding** -Graphic Organizer: Viewing and Inquiry Guide -'Exit' cards to check for understanding -Notebooks with vocab. (if needed) **Other** -clipboard for observation (with groups listed) -sticky notes and anchor chart

The Lesson - Part 2: Action APPROX. 20 MINS.	Prompts & Questions	Materials
This section of the lesson describes how students will **explore and investigate**. This is a time when students can communicate, discuss, support each other, construct new knowledge, develop concepts, and use higher order thinking skills. This is a time when the teacher can interact with students, differentiate instruction to meet all student needs, identify and challenge student misconceptions and assess for learning. Looks Like… • an investigation • small groups of students working together • students asked to summarize and generalize • includes appropriate use of manipulatives/props (VR viewers) • includes appropriate use of technology • teacher circulating to keep students moving forward… may include providing hints, asking students to hypothesize (ask 'What If?' questions), generalize, probing where misconceptions are occurring Instruction includes • Modelling • Scaffolded exploration • Co-construction of understanding • Gradual release of responsibility • Differentiation • A variety of groupings and collaborative structures ACTION **Small Groups:** 28 students, divided into 7-8 Groups of 3-4 students **Virtual Field Trip using VR Viewers** (To be related to Environmental Impact) Big Ideas for future discussion: ▪ International trade can harm the environment by encouraging industry. A good example is the loss of biodiversity. Fishing, hunting, and forestry can endanger plant and animal life directly, by overuse of resources, and by depleting habitats. ▪ Governments can reduce environmental damage by setting rules for industries (like, for example, banning the importation of ivory). **Activities:** ▪ Students make inferences, gather information, and ask inquiry questions using VR Viewers –Ascape Virtual Travel (Okavango Delta, Botswana – Walk with Elephants) ▪ Students fill out a Viewing and Inquiry Guide (or similar graphic organizer) to record observations, ideas, information, and inquiry questions	**Where might…** **Why would…** **How will…** *Direct students to the big ideas through questioning, may include providing hints, asking students to hypothesize (ask 'What If?' questions), generalize, probing where misconceptions are occurring.* *Can they make any connections to any social, economic, or environmental issues?* Groups (28 students in 7-8 groups) (* = ESL or student requiring additional support) Underlined = student with phone/app	**Technology** -Digital projector -Computer -Elmo projector -Virtual reality viewers (one per group) -One 'smartphone' per group -Ascape App (pre-downloaded onto phones) **Manipulatives/Props** -Virtual reality viewers (one per group) -One 'smartphone' per group **Instructions for Students** -Learning Goals posted -Success Criteria posted **Handouts/Scaffolding** -Graphic Organizer: Viewing and Inquiry Guide -'Exit' cards to check for understanding -Notebooks with vocab. (if needed) **Other** -clipboard for observation (with groups listed) -sticky notes and anchor chart

The Lesson – Part 3: Consolidation APPROX. 15 MINS.	Prompts	Materials
This section of the lesson is a time to highlight the big idea(s), identify common errors, assess FOR learning for next steps, assess AS learning, and have the students reflect on learning (meta-cognition). ◆ Helping students demonstrate what they have learned ◆ Providing opportunities for consolidation and reflection ◆ Checking for conceptual understanding of critical learning through reflection, summary, application Looks like … ▪ students reflecting on learning by completing an 'exit card' ▪ students summarizing and articulating their thinking to the group (**mini-congress**) ▪ teacher identifies students' responses that contain the 'big ideas' Exit cards – Individual (4 mins.) Students can write a reflection about what they learned in the unit and how the VR experience either reinforced their learning or prompted more questions. Use mini-congress – Small group, then whole-class discussion (5 mins.) Students summarize and articulate their thinking to the group (**mini-congress**) One speaker per group reports important learning back to the class and 'anchors' thinking on an anchor chart. Anchor Chart (5 mins.) An anchor chart is a strategy for capturing students' voices and thinking. Anchor charts are co-constructed. By making students' thinking visible and public, they "anchor", or stabilize and scaffold classroom learning.	Exit Cards To wrap up our learning today, I'd like you to think about at least one thing that you learned, that stood out, or that you found particularly interesting. You're going to write that thought on an 'exit card'. This part of the lesson is *individual work*. (What does this mean, what kind of voices will we be using?) You will have 4 minutes to complete your 'exit card'. If you finish early, you can add a drawing. Keep it to yourself until we come back to our groups. Mini-congress Next we are going to gather back into our groups. In your groups, take 5 minutes to go around, sharing one at a time, what you're thought was. After each person has had a turn, fill out one sticky note per group on what stood out for you today. One speaker per group will share your sticky with the class and post it up on our anchor chart. Anchor Chart Students share / post Clean up for transition to next period.	Technology -Digital projector -Computer -Elmo projector -Virtual reality viewers (one per group) -One 'smartphone' per group -Ascape App (pre-downloaded onto phones) Manipulatives/Props -Virtual reality viewers (one per group) -One 'smartphone' per group Instructions for Students -Learning Goals posted -Success Criteria posted Handouts/Scaffolding -Graphic Organizer: Viewing and Inquiry Guide -'Exit' cards to check for understanding -Notebooks with vocab. (if needed) Other -clipboard for observation (with groups listed) -sticky notes and anchor chart

Assessment Tools (diagnostic/formative/summative)

Based on Assessment FOR Learning and Assessment AS Learning. This could include success criteria, checklists, observation notes, etc.

Next Steps

Based on Assessment FOR Learning and Assessment AS Learning, record next steps which may include thoughts about the next lesson, groupings, instructional strategies, home connections etc.

Looks Like…

- Application
- Differentiated exploration
- Reflection
- Concept Practice

Follow up / next lesson

-Book Chromebook cart to research questions from this lesson.

-Students use Google Expedition (or similar app) with VR Viewers to explore another country of their choice.

-Students will contribute to a collaborative Google Classroom group chat to talk about their inquiries, and then pursue research to answer their own questions or the questions of their peers.

Extension

Share / watch a short VR story in the Vrsa app called Clouds Over Sidra which tells the story of a 12 year old living in a refugee camp. Have students witness the story and then engage in a STEM / making activity whereby they design a prototype for product or tool which would help Sidra and her community. Not only will this engage student in the design process, but it promotes empathy as well!

Self Reflection

What went well?	What didn't go so well?	What do I need to change for next time?

Notes and Ideas:

Grade 6 Social Studies Canada's Interactions with the Global Community Name:

Vocabulary & Key Words

accord, aid, barter, culture, developed country, developing country, economy/economics, environment, exchange, export, geography, global, history, immigration, import, intergovernmental organization, international convention, local, media, natural resource, non-governmental organization, politics, relief efforts, social, technology, tourism, trade

Word	Meaning	Word	Meaning
accord	An official agreement or treaty. Example: "a peace accord"	aid

Canada's Interactions with the Global Community

VIRTUAL FIELD TRIP MINI-CONGRESS

What are some important things we learned or found interesting today?

I think... I noticed... I wonder... I predict... I learned... I realized...

My group members (who I'm working with)

Me _____

_____

_____

_____

_____

Our Learning Goals (purpose)

We are learning to:

- Use our active listening skills to work well in groups.
- Make inferences using clues and prior knowledge.
- Describe the ways Canada's interactions through trade have affected the environment.
- Ask inquiry questions about environmental and global issues.
- Answer our inquiry questions by gathering information.
- Organize the information we gather.

Instructions (what we need to do)

A

- Take turns using the VR viewer
- Fill out the Viewing & Inquiry Guide in detail, come up with inquiry questions
- Stay on task and with my own group at all times
- Help my group members
- Ask for help if I need it

B

- Complete an 'exit card'

C

- Share my ideas with my group
- Add at least one thought or idea to the anchor chart (per group)

Success Criteria (how to be successful)

☐ I participate in all activities.

☐ I listen <u>actively</u> and can respond to others.

☐ I *collaborate* with others.

☐ I ask thoughtful questions.

☐ I demonstrate good responsibility and self-regulation skills (stay on task, with my group & complete my work)

☐ I can gather a variety of information.

☐ I can make inferences using my knowledge and the clues around me.

☐ I can identify some of the ways that Canada interacts with the world.

☐ _____
